

CLAIMS

What is claimed:

5 1. A device for viewing Internet content such that:

a host computer receives information about a web page from outside and renders that information in memory facilitated by a browser program;

10 the color depth of the rendered web page is reduced, the web page is digitally compressed and transmitted to the device where it is decompressed for view by a user;

15 a software program running on the device implements a window with buttons providing web functions which are fixed with respect to the window and implements scrolling of the web page received with respect to the window.

20 2. A device as claimed in Claim 1 such that:

the device enables the user to click on the window and when the user clicks on an area of the window, a message is sent to the host computer and the host computer provides a click down in the same location of the web page, a new web page is loaded, color reduced, compressed and sent to the device;

all information sent to the device is information of the entire new web page.
